

CASE STUDY

POETON
Coating Technology Worldwide

Founded in 1895, Poeton are the UK's leading surface engineering specialists, providing a wide choice of surface coating, serving customers worldwide.

Under the 'Apticote' trademark, they offer hard chrome and cadmium electroplating, electroless nickel, thermal spraying, anodising, plasma electrolytic oxidation (PEO), polymer coatings and a range of specialist hybrid treatments that provide unique performance advantages.

Envesca have been providing in-house health and safety training to Poeton Industries since 2012. As an organisation Poeton recognise the importance of continually improving the health and safety culture within their business to ensure an ongoing commitment to enhanced safety throughout the company.

In addition, we have also run the IOSH Managing Safely course at Poeton's site in Gloucester. As well as learning all aspects of how to carry out, manage and review risk assessments, the course also brought all the candidates up to speed on the practical actions they need to take to handle health and safety in their teams.

Jan Hughes, Health and Safety and HR Manager, shares, *"I always hear positive comments about the training you provide. It always has an impact on the way that the staff think about health and safety."*

"We have just had our monthly health and safety meeting and those who attended the IOSH Managing Safely training are clearly thinking in a different way!"
